DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e). (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art (page 2, second paragraph), and further in view of FR 1.243.333.

Applicant's admitted prior art discloses manufacturing an aluminum cast product comprises the steps of projecting a controlled member into the cavity of the mold (figure 12). holding the control member into at least one opening of the control member. The control

Application/Control Number: 09/756.825

Art Unit: 1725

member is adjustable toward the center of the cavity. A compress gas is supplied to the pipe during pouring of the molten metal for cooling. A plug is attached to an open end of the pipe.

Applicant's admitted prior art fails to disclose the following: the controlling member has a tip inserted to the opening of the pipe, wherein is stepped at a middle part of the tip. Coupling a bracket having a hole to a pipe. The surface layer of the control member is selected from group consisting of Ti, TiN, TiC, CrN, and BN. The compressed gas is an inert gas.

However, FR 333 discloses a control member having an insert is stepped at a middle part toward the tip for the purpose of securing the tube in place while under casting (page 2) and that allows axial movement without radial dislocation.

Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to provide an insert as taught by FR '333, in Applicant's admitted prior art in order to secure the tube while casting, wherein only allow axial movement without radial dislocation.

FR '333 teaches having an insertion pin for securing the tube, but does not teach coupling a bracket between the pin and pipe. However, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to provide a bracket, since it has been held that the provision of adjustability, where needed, involves only routine skill in the art. In re Stevens, 101 USPQ 284 (CCPA 1954).

Application/Control Number: 09/756.825

Art Unit: 1725

In addition, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to provide surface layer being either Ti, TiN, TiC, CrN, or BN, since any of these metals are at a higher melting point than aluminum.

Applicant's admitted prior art discloses using compressed gas, but do not mention of an inert gas. However, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to use inert gas, since the use of inert gas would prevent inclusion of oxides.

Response to Arguments

4. Applicant's arguments filed 2/28/02 have been fully considered but they are not persuasive.

1. applicant argues that the JP '768 patent does not teach "the pipe is held in a manner so that it is moveable in its axial direction without radial distortion at its end." Examiner agrees with applicant's argument. Therefore, US '768 was not used to reject the present application by itself. FR '333 was used to combine with JP '768 to show the purpose of having an insertion pin for securing the tube. In addition to the teaching, the pin is arranged in a manner wherein the pipe would only allow axial movement, but would be limited to any radial dislocation.

Therefore, claims 1-16 along with new claims 17 and 18 remain rejected.

Application/Control Number: 09/756,825

Art Unit: 1725

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Len Tran whose telephone number is (703)605-1175. The examiner can normally be reached on M-F, 8:30 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor. Tom Dunn can be reached on 703-308-3318. The fax phone numbers for the organization where this application or proceeding is assigned are (703)305-3602 for regular communications and (703)305-3602 for After Final communications.
